SOCKS CONSTRUCTION
Charlie Socks

Socks Construction takes pride in over 35 years of home building experience. Each project Charlie undertakes offers the highest quality of materials, precise design standards, energy efficiency and superior craftsmanship to collectively enhance what nature has provided.

Charlie is honored and fortunate to live in the Grand Traverse region. Building is his labor of love and his team is comprised of local craftsmen and vendors.

It is Socks Construction's mission to uphold the utmost standard of integrity and dependability to thoughtfully plan each and every detail while creating spectacular architectural spaces that will evoke an extraordinary lifestyle.

Charlie's goal has always been to build in such a way that connects with the local community, allowing him to create places where people feel connected to each other and to the natural environment.

Socks' commitment to Mother Nature is a benefit for their customers, in that environmentally-conscious building practices create stronger, healthier and more energy-efficient homes. Focusing on the “land first” methodology is one of their unique development strategies. While identifying a design approach it is always their intent to recognize special features, maximize open space and preserve view corridors. By allowing the land to help dictate the character of the project, each project evolves into its own unique identity.
